Newsletter — Summer 2011

Welcome to the Wardsflex Summer 2011 newsletter — Introducing new products we now offer to all of our customers in the drainage industry. Headlining with pipe repairs systems and consumables then following on with a few of the items Wardsflex is more well known for supplying.

NEW ADDITIONS TO OUR PRODUCT RANGE

The Fernco Pipe Doctor, the only WRc approved patch repair system in the market place.

This is a high performance 'no dig' pipe repair solution that provides a quick and easy method to repair damaged drains and sewers from the inside. The Fernco Pipe Doctor kits are supplied in a range of sizes and we have a very competitively priced start-up pack with everything you need for your first few repairs to recover the cost of your investment.

In addition to full start-up kits, all the component parts are available to purchase separately, including a range of packers suitable for all size pipes up to 525mm.

The SYDDAL Wraparound Clamps

Manufactured as a single section repair clamp to provide an economic and permanent method of repairing damaged pipes, whether pin-hole leaks or full 360° circumferential breaks. The Wraparound clamp is lightweight and easy to handle and available in a wide range of sizes. All clamps feature a well proven WAFFLE GASKET, where the fine ridges mould themselves to cracks and irregularities in the damaged pipe ensuring a reliable and permanent repair even with pressure pipelines such as rising mains

Pipe Repair Clamps & Couplings

Flexseal Flexible Couplings are suitable for the most extensive range of pipe sizes and are specifically designed to connect and repair pipelines of similar or differing materials and sizes used in drains & sewers.

For rejoining pipes of differing sizes, for example during a cut out repair, **Flexseal Adaptor Couplings** or **Step Couplings** provide a solution with a stepped moulded elastomeric sleeve that has different diameters at each end.

Just a few of the advantages:

- Durable design ensuring high performance and reliable seal
- Stainless steel shear bands provide excellent resistance to heavy loads
- Complies with WIS 4-41-01 (all public sewers for adoption)

For Steelkane, Nuflex Polypropylene, Coiled Spring, Ferret, Cobra, Air Push Rods, visit www.wardsflex.co.uk to check out our extensive range of Drain Rods and Accessories.

An increasing number of access chamber covers in food premises now have threaded key holes and as a result they can be very difficult to remove for maintenance without the correct tools.

Wardsflex manufacture a variety of Metric Threaded Manhole Cover Hand Keys which can be purchased as individual pairs to suit your specific requirements, or as a complete set of five pairs at a reduced price which includes a canvas tool bag for safe storage.

**Spotlight
on
Manhole
Lifting
Equipment**

The **Key Tec Manhole Lifter** comes equipped with a load spreader bar which sits on top of the cover and attaches via threaded lifting keys. The spreader bar is fitted with a rotating lifting hanger which means it can be approached from any direction to lift, the hanger can be folded flat for easy transportation and storage. A tool bag is provided for the lifting keys and high leverage lifting hook. An alternative spreader bar (220 mm longer) is available for larger covers.

Drain Buddy Gulley Opener is ideal for Un-seating and opening hinged drain covers. Its 'unseating' or 'breakout' facility can also be used on non-hinged covers.

The **Wardsflex** Manhole Cover Lifters enable safe, easy lifting of single and double manhole covers (depending upon model) by a single person.

For heavy duty lifting applications the Wardsflex MK 1 (pictured) & MK 2 Hydraulic Manhole Cover Lifters are ideal. All Manhole Cover Lifters are supplied complete with a set of keys.
